

MICROSOFT PROJECT - ESSENTIALS

COURSE LISTING

This 1-2 day course provides practical guidance on how to plan and schedule projects using Microsoft Project. On completion of the course delegates will have acquired the skills needed to create a new project, entering task, resource and cost information; analyse and adjust schedules with date, dependency and resource constraints; customise and print Gantt Chart views and reports plus record and review task progress against the Baseline.

Duration: 1-2 Days

Project Overview

- Project Management Concepts
- The Project Lifecycle
- The Project Triangle
- Menus/Tabs & Views
- Project Options
- Base Calendar
- Opening, Closing, Saving a New Project
